

Autonomous Enterprise Framework (AEF) - Full Specification

Comprehensive System Vision, Use Cases, and Data Governance

1. System Vision & Problem Statement

The AEF is an AI-native ecosystem designed to eliminate the 'Decision Crisis' for entrepreneurs. By leveraging a Meta-Agent architecture, the system identifies market gaps and deploys autonomous digital labor to execute business operations, allowing the human to remain the visionary.

Category	Operational	Executive
Internal	AI Architects, Developers	CEO, COO (Strategy)
External	Entrepreneurs, Meta-Agents	Investors, Regulators

Autonomous Enterprise Framework (AEF) - Full Specification

Comprehensive System Vision, Use Cases, and Data Governance

2. Fully Developed Use Case: Initialize Enterprise

Use Case Name:	Initialize Autonomous Enterprise
Actors:	Entrepreneur & Meta-Agent
Preconditions:	Entrepreneur: Email & Wallet available; Meta-Agent: Compute resources active.
Postconditions:	System account created; Verification saved; Financial gateway associated.

Actor Activities	System Response
Entrepreneur enters email & focus.	System prompts for niche & resource caps.
Meta-Agent confirms resource limits.	System creates secure profile & verifies email.
Entrepreneur provides wallet auth.	System connects to financial gateway & saves info.
Entrepreneur selects launch date.	System creates booking & sends confirmation.

3. Data Governance (CRUD Matrix)

Entity	Entrepreneur	Meta-Agent	Auditor Agent
User Profile	C, R, U	R, U	R
Market Path	R, U	C, R, U, D	R
Wallet Auth	C, R, U	R, U	R
Knowledge Logs	R	R, U	C, R, U
