Flow of Activities

Actor	System
Entrepreneur and Meta-Agent want to create a business account and enter basic setup information.	The system creates a new Enterprise Instance account.
The Entrepreneur enters email address and regional business focus.	1.1 The system prompts for email and geographic niche data.
Meta-Agent confirms compute availability and resource limits.	1.2 The system prompts for resource caps and scaling parameters.
Entrepreneur provides banking/wallet authorization for API costs.	The system creates a secure profile and verifies the email. 2.1 System saves the regional focus parameters.
The Entrepreneur enters the date and initial 'Step One' launch time.	The system creates accounts, saves banking/wallet info, and connects with financial gateway. 3.1 System saves and verifies the encrypted email.

Exception Conditions:	1. Email address is not valid/verified. 2. Resource caps exceed wallet balance. 3. Banking authorization failed. 4. Market data inaccessible for regional focus.
