

Meta-Agent System: Use Case Specifications

Operational Scenarios for the Recursive Labor Ecosystem

Use Case ID	UC-01
Use Case Name	Market Gap Identification
Primary Actor	Entrepreneur / Meta-Agent
Description	The Entrepreneur provides a broad interest. The Meta-Agent autonomously scans global web data to identify under-served niches and presents a validated 'Step One' business path.

Use Case ID	UC-02
Use Case Name	Autonomous Sub-Agent Spawning
Primary Actor	Meta-Agent
Description	Upon approval of a business path, the Meta-Agent provisions specialized digital labor (e.g., a Sales Agent) by injecting specific CoT 'Labor DNA' into a new agent instance.

Use Case ID	UC-03
Use Case Name	Financial Task Settlement
Primary Actor	Sub-Agent / Banking API
Description	A specialized agent completes a predefined milestone. The system verifies the outcome and triggers an automated payment via the banking API to settle operational costs.

Use Case ID	UC-04
Use Case Name	Recursive Scaling Audit
Primary Actor	Red-Team Agent / Entrepreneur
Description	As the system spawns more agents, a 'Red-Team' auditor agent reviews the Chain of Thought logs for quality and reports potential 'hallucination cascades' to the Entrepreneur.

Use Case ID	UC-05
Use Case Name	Portfolio & Inventory Management
Primary Actor	Sub-Agent (Ops)
Description	The Operations agent autonomously updates the business's digital storefront, managing stock levels or service availability based on real-time consumer demand.
